Notes:
a - Maximum Contaminant Levels per E.P.A.'s National Primary Drinking Water Regulations. Safe Drinking Water Act (42 USC Chapter 6A Section 300f)
b - E.P.A. National Secondary Drinking Water Regulations are non-enforceable guidelines regarding contaminants that may cause cosmetic effects or aesthetic effects in drinking water.
c - Recommended action level from the Office of Surface Mining Reclamation and Enforcement - Appalachian Regional Coordinating Center, Pittsburgh, PA (September 2001)
d - Samples with no Sample ID or a Sample ID beginning with a Q are from Quantum Laboratories. Sample ID's beginning with a D are from DEP Bureau of Laboratories.
e - Procedures for collecting water samples are detailed in the SOP (available on request) and summarized in the following: Water is run from sampling point for approximately 10 to 15 minutes to purge any water in the pipes and storage tank. If there is an aerator in the faucet it is removed prior to sampling. The sampler dons gloves and fills the appropriate containers provided by the laboratory for the respective analyses. The sampling point is swabbed inside and out with disinfectant and then purged prior to collection of samples for bacterial analysis. Field measurements are made with instruments that have been properly calibrated and the LEL of the sample headspace is measured for both hot and cold water sources, if available.

Notes:
a - Maximum Contaminant Levels per E.P.A.'s National Primary Drinking Water Regulations. Safe Drinking Water Act (42 USC Chapter 6A Section 300f)
b - E.P.A. National Secondary Drinking Water Regulations are non-enforceable guidelines regarding contaminants that may cause cosmetic effects or aesthetic effects in drinking water.
c - Recommended action level from the Office of Surface Mining Reclamation and Enforcement - Appalachian Regional Coordinating Center, Pittsburgh, PA (September 2001)
d - Samples with no Sample ID or a Sample ID beginning with a Q are from Quantum Laboratories. Sample ID's beginning with a D are from DEP Bureau of Laboratories.
e - Procedures for collecting water samples are detailed in the SOP (available on request) and summarized in the following: Water is run from sampling point for approximately 10 to 15 minutes to purge any water in the pipes and storage tank. If there is an aerator in the faucet it is removed prior to sampling. The sampler dons gloves and fills the appropriate containers provided by the laboratory for the respective analyses. The sampling point is swabbed inside and out with disinfectant and then purged prior to collection of samples for bacterial analysis. Field measurements are made with instruments that have been properly calibrated and the LEL of the sample headspace is measured for both hot and cold water sources, if available.
f - The sample was taken after approx. 275- 350 gallons had been drawn from the well. When collecting the before sample, after the purging and refilling of the system, the water was very turbid and brown. The system was purged in a manner as requested by the resident.

Water Well Analytical Data

Land Owner: Ex. 6 - Personal Privacy
Water Supply Lat/Long: 41.72601 / 75.87738
Water Supply Depth: 205'
Treatment (Y/N): Y

Water Supply Address: Ex. 6 - Personal Privacy MOCK, PA 18816
Type of Water Supply:
Age of Water Supply: 3 YEARS

Gas Well Operator: Cabot Oil & Gas Corporation
Gas Well: LEWIS H. 2
Gas Well Permit No: N/A
